A so-called InstallShield Silent Response File with the name SETUP.ISS will be created in the Windows directory by calling up our SETUP.EXE with call parameter **-r**.

All settings (path, type of installation, etc.) made by the user during the installation are saved in this file.

Caution: The installation must have been finished completely (including reboot) to ensure that the Setup. Iss will be created correctly.

Users can then perform a silent installation on other computers using this Setup. Iss File.

The other computer must have access to the CD.

The command:

SETUP.EXE -s -f1"Pfad1\SETUP.ISS" -f2"Pfad2\SETUP.LOG will start the installation on the other computer.

N:\SEMA_DE\DISK1>setup.exe -s -f1"Pfad1\setup.iss" -f2"Pfad2\setup.log
```

If the respective version already exists on the computer, the silent installation will be cancelled – no repair or the like will be carried out.

The corresponding errors will be recorded in the Log-File SETUP.LOG.
